

BodaLink

On-demand boda rides and instant parcel delivery, from anywhere

Kimana and Oloitokitok | Powered by Quickshelf | Built by Flynn Technologies

Finding a boda or sending a parcel is slow and unclear

Waiting at the stage

Passengers walk and wait. Riders sit idle without knowing who needs them.

No clear price

The fare is argued at the stage. Neither side knows what is fair until they negotiate.

No way to check who is who

Passengers and senders cannot verify the rider, and riders cannot verify the passenger.

You name the place. Riders name the price

1

Say where

From and to. Pick up a parcel from any shop or home and send it anywhere.

2

Riders bid

Riders online near you reply in seconds with their own price. 100 and 150 are the popular ones.

3

You choose

Pick the price and rider you like. Pay the rider directly. Parcels use a pickup code.

Every rider is identified before the first job

National ID

ID number and a photo of the card

Selfie with ID

Matches the face to the card

Bike and plate

Photo with the number plate visible

Admin review

A person at BodaLink approves each rider

Passengers too

Phone verified by a one-time code. Optional ID and emergency contact earns a verified badge.

Riders keep every shilling

KSh 100

day pass for 24 hours online

0%

taken from any fare

Day 1

free for every new rider

Riders set the price on every ride and parcel. BodaLink earns only from the day pass.

One installable app, no app store

Install from the browser

Home screen icon, full screen, works on weak data

Live bids and alerts

Bids and job alerts arrive instantly

Google Maps built in

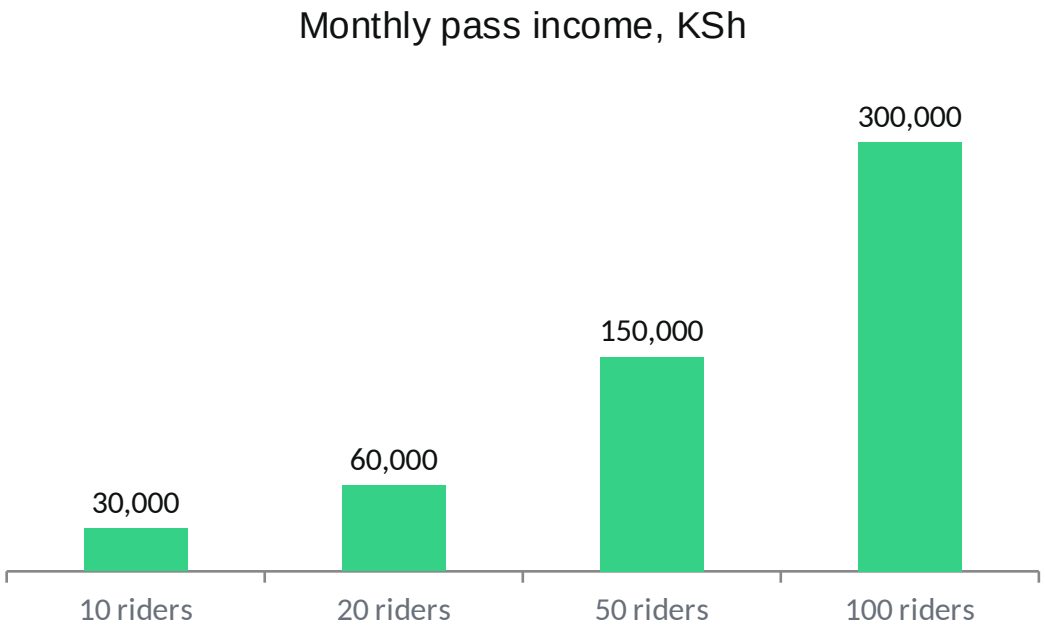

Share pickup location, open routes in Maps

M-Pesa day pass

Riders pay once for 24 hours online

Income grows with active riders

Illustration

Assumes every rider buys a KSh 100 pass every day for 30 days. Real income depends on how often riders go online.

Next: pilot in Kimana

Now Test with a small group of riders and passengers

Next Live server on a domain, real SMS codes and M-Pesa

Later Android app, in-app maps and rider tracking
